

To whom it may concern

I am writing to apply for the position of Internship. I have experiences in different fields.

I graduated from Amirkabir University in MS and BS in electrical engineering. I ranked in BS and MS and graduated with good mark. Now I am a

I am a telecommunication system engineer and I have done projects related to signal processing for IoT protocols such as LoRa and Sigfox. Also I was a python developer and I am familiar with frontend programming such as javascript and Angular framework. I have done some deep learning projects related to segmentation of objects and finding color palette using python (Keras). In addition I have done some C++ programming for ICMP and TCP/UDP protocols to test the latency and throughput.

I want to continue my research in joint network and machine learning and be a specialist in these fields of study.

I believe that I can learn many things in internship and I try to make the best of my effort.
